The Rebel Chart Checklist

Sean Donahoe's nightly **30-minute chart routine**. 1 daily chart, 3 moving averages, 1 pattern. Know tonight what you are watching tomorrow.

DAILY CHART | 20, 50 AND 200 | TRIGGER, MARK, CONFIRM

FROM THE TRAINING OF

Sean Donahoe

SAME CHART. SAME RULES.

BEFORE THE ROUTINE

Set the chart up once. Then learn 1 pattern.

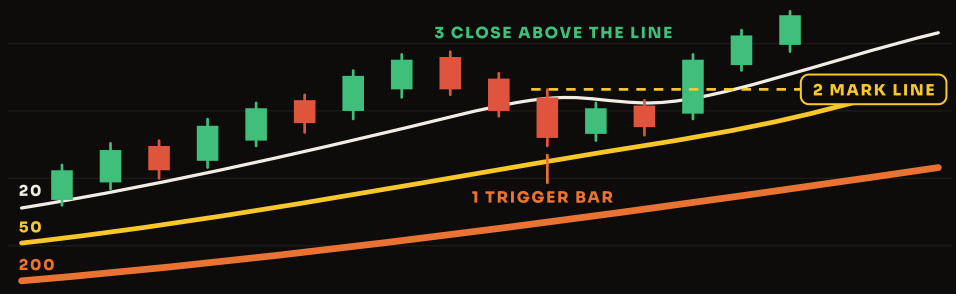

Sean reads every chart the same way: 3 moving averages stacked in order, a dip, a marked high, then a confirmed break back up. He calls it **a qualified dip in an uptrend**. Tick every box. If a chart misses 1, it is not a setup.

Set up once

- [ ] Open **TradingView**. The free account works.
- [ ] Set the timeframe to **D**, the daily chart.
- [ ] Add 3 simple moving averages: **20** white **50** yellow **200** orange
- [ ] Load your watchlist and save the chart.
- [ ] Keep 3 lists: the **full list**, a **staging area** for setups waiting to confirm, and **active trades**.
- [ ] Delayed data is fine. Every signal is on the daily close.

The pattern: trigger, mark, confirm

- [ ] The **50 has been above the 200** for more than 20 days.
- [ ] The **20 is above the 50** and the 50 is above the 200. Price was above the 20.
- [ ] **Trigger bar:** a daily candle dips below the 20. Candle color does not matter.
- [ ] **Mark line:** draw a horizontal line at the very top of the trigger bar's wick.
- [ ] **Confirmation bar:** a later daily candle **closes** above the mark line.
- [ ] It confirms within **10 to 20 bars**. After that the setup is stale.
- [ ] **Look left** at least 12 months. The bigger trend agrees.

Walk away when

- [ ] The 20 and the 50 have **crossed 3 times**. The chart is ranging.
- [ ] The setup did not confirm inside **20 bars**.
- [ ] The chart is going **sideways**, or the trend is not clear.
- [ ] Nothing on the list passes tonight. No trade is a result.

> **"If it doesn't pass the checkboxes, walk away."**

THE NIGHTLY ROUTINE

About 30 minutes. Often less.

Run it after the close at 4:00 PM ET, or the next morning over coffee. Sean runs it in the same order every time, like a production line. **The minutes are a suggested pace.** With practice the whole scan takes far less.

0 to 5 MINUTES

1 Active trades

Open your active list. For each chart: is it at your target, or close enough? Has it dipped past the 50? Is it showing exhaustion wicks or going sideways? **Decide, then move on.**

5 to 10 MINUTES

2 Staging area

Open the setups that are waiting. Did a daily candle **close above the mark line**? If yes, that is your trade for tomorrow. Fix your risk before you click, log it, and move it to active.

10 to 25 MINUTES

3 Scan the full list

Top to bottom, 1 pattern at a time. Up, down or sideways? Is the 20 over the 50 over the 200? Any dip below the 20? If yes: **mark the high**, set an alert for "crossing up, once per bar close", and move it to staging.

25 to 30 MINUTES

4 Walk away

Nothing confirming? You are done. The alerts go to your phone, so you do not watch a screen. **A night with no trade is the routine working.**

Your week

	MON	TUE	WED	THU	FRI
Active trades	☐	☐	☐	☐	☐
Staging area	☐	☐	☐	☐	☐
Full scan	☐	☐	☐	☐	☐
Alerts set	☐	☐	☐	☐	☐

Practice first

- ☐ **Paper trade for 30 days** before you trade real money. Then trade small.
- ☐ Run the scan as **flashcards**: 1 chart, 1 answer, next chart.
- ☐ Use TradingView **Bar Replay** to go back in time and call each setup as if it were live.
- ☐ Decide your risk **before** every trade. Sean's own rule is 1% to 2% a trade.

> **"We don't chase rallies. We look for dips in an uptrend. Consider it a discount."**
